ENDING CORPORAL PUNISHMENT AS ACE PREVENTION - NO HIT ZONES
 Randell Alexander MD PhD

University of Florida – Jacksonville

Wolfson Children’s Hospital
Institute for Child Abuse Prevention
DEFINITIONS

• Spanking: hitting with a hand or object with the stated intent of causing pain and therefore discipline

• Corporal or physical punishment: spanking and any other physical hitting with the stated intent of causing pain and therefore discipline
ADVERSE CHILDHOOD EXPERIENCES AND THEIR RELATIONSHIP TO ADULT HEALTH AND WELL-BEING

A collaborative effort of Kaiser Permanente and The Centers for Disease Control and Prevention

www.acestudy.org

Vincent J. Felitti, M.D.
Robert F. Anda, M.D.
SPANKING AS PART OF THE LANDMARK CDC/KAISER PERMANENTE ACE STUDY DATA SET

• Felitti et al 1998:
  – Spanking was not included as one of the 10 categories of ACEs
  – Spanking was not included within the physical or emotional abuse categories.

• Afifi et al 2017 did a separate analysis using data on spanking collected as part of the CDC/Kaiser Permanente ACE Wave II study data (N = 8316)

Spanking as part of the landmark CDC/Kaiser Permanente ACE study data set

• Spanking:
  – “Sometimes parents spank their children as a form of discipline. While you were growing up during your first 18 years of life how often were you spanked?”
  – Spanking was coded as a “yes” if more than a few times per year

• 54.8% of the respondents reported being spanked
Physical/emotional abuse:
• While growing up, during your first 18 years of life, how often did a parent, stepparent, or adult living in your home do the following.
  – (physical abuse)
    • pushed, grabbed, shoved, slapped you or threw something at you and
    • hit you so hard that you had marks or were injured?
  – (emotional abuse)
    • swore at you, insulted you, or put you down
    • acted in a way that made you afraid that you might be physically hurt.
Spanking as part of the landmark CDC/Kaiser Permanente ACE study data set

Associations between spanking and physical/emotional abuse with poor mental health outcomes

Spanking accounted for additional statistical model variance beyond physical and emotional abuse

Reduced Prefrontal Cortical Gray Matter Volume in Young Adults Exposed to Harsh Corporal Punishment

Akemi Tomoda, MD, PhD^{1,2,3}, Hanako Suzuki, MA^{2,3}, Keren Rabi, MA^{2}, Yi-Shin Sheu, BS^{2}, Ann Polcari, PhD^{1,2}, and Martin H. Teicher, MD^{1,2}

^1 Department of Psychiatry, Harvard Medical School, Boston, MA, USA

Defined Harsh Corporal punishment:
- 12x per year for at least 3 years
- object used 1x/year such as belt, hairbrush, or paddle
- disciplinarian was a custodial adult

Excluded:
- physical abuse that resulted in injury
- CP used for discipline, with parents in emotional control, and not striking out in anger

Results—Gray Matter was reduced by
- 19.1% in the right medial frontal
- 14.5% in the left medial frontal
- 16.9% in the right anterior
  - Significant correlations between these regions and performance IQ on the WAIS-II

Fig. 1.
Significant differences between corporal punishment (CP) subjects and controls. Significantly lower gray-matter densities in CP subjects were measured in the right medial frontal gyrus (medial prefrontal cortex, BA10). Crosshairs placed at x=14, y=47, z=1, the right medial prefrontal cortex. Color scale: 0–5 represent t-values.

NeuroImage. 2009. 47:T66-T71
RESEARCH ON SPANKING AND ITS IMPLICATIONS FOR INTERVENTION

Elizabeth Gershoff, Ph.D.
Professor of Human Development & Family Sciences
The University of Texas at Austin

Key points

• Numerous studies have found that physical punishment increases the risk of broad and enduring negative developmental outcomes.
• No study has found that physical punishment enhances developmental health.
• Most child physical abuse occurs in the context of punishment.

Durrant and Ensom, 2012

America Academy of Pediatrics 
Policy Statement - 2018

“Aversive disciplinary strategies, including all forms of corporal punishment and yelling at or shaming children, are minimally effective in the short-term and not effective in the long-term. With new evidence, researchers link corporal punishment to an increased risk of negative behavioral, cognitive, psychosocial, and emotional outcomes for children.”

“Spanking alone is associated with adverse outcomes, and these outcomes are similar to those in children who experience physical abuse”

Sege RD, Siegel BS, AAP COUNCIL ON CHILD ABUSE AND NEGLECT, AAP COMMITTEE ON PSYCHOSOCIAL ASPECTS OF CHILD AND FAMILY HEALTH. Effective Discipline to Raise Healthy Children. Pediatrics. 2018;142(6):e20183112
TRENDS ABOUT SPANKING
SPANKING DECREASING OVER TIME

Figure. Trend in Prevalence of Spanking Within the Past Year Among US Parents at Modal Age 35 Years From 1993 to 2017

61 countries prohibit corporal punishment. Serbia, Japan and Seychelles are the most recent.

https://endcorporalpunishment.org/countdown/
SOCIAL NORM CHANGE

• Social norm change is key to preventing corporal punishment and its adverse consequences
• Laws in some countries help to accelerate such changes
• No Hit Zones are one way to attempt to create new social norms.
• Like No Smoking zones
NO HIT ZONES

• Sometimes called “Hit Free Zones”

• Spanking is hitting
IMPLEMENTATION

• Signage
• Policy if applicable
• Train the staff about what this is
• APSAC Advisor article

https://docs.wixstatic.com/ugd/4700a8_9e3d91c8fcae403b8eeb43ab2362e42a.pdf
ELEMENTS OF A HIT FREE ZONE IN HOSPITALS

- Team member education/engagement
- Distraction tools/training on de-escalation
- Hospital website and brochure to include local and online resources for parents related to positive parenting and non-physical discipline techniques
- Posters/clings
- Brochures
- Social Media
THE ROLE OF STAFF IN HIT FREE ZONES

Promote a welcoming, safe, and healthy environment

Learn and use supportive communication strategies to provide support and prevent problem escalation

Supportive interventions when early signs of stress are identified
Team member education

- 1-1.5 hour live training for specific staff-nurse managers, social work, security, child life, pastoral care, residents

- Training includes overview of hospital policy, explanation of HFZ, research on negative effects of corporal punishment, scenarios and role play

- Online module for all other team members
COLLATERAL NEEDS

• Posters placed in parking garage and in hospital explaining that we are a HFZ and what that means (English, Spanish)

• Brochures that trained staff can provide to families with information on discipline alternatives and community resources that are available for families that need help.

• Hospital admission and discharge packets

NEW! RESOURCES FOR FAMILIES YOU SERVE!

APSAC is proud to offer a series of parenting tips designed to address the most prevalent risk factor for child abuse: social norms around corporal punishment.

These materials include:
- effective alternatives by developmental age and stage
- a pledge to become a No Hit Home
- latest research on harms of spanking

These materials were produced by the experts who serve on the National No Hit Zone Committee of the National Initiative to End Corporal Punishment. Bulk pricing designed to be less expensive than individual printing.
